

Jonckers Successfully deploys Borland® SilkTest® and Automates Software Testing

Portland, Oregon – February 6th 2008

Jonckers Translation & Engineering, Microsoft Service Vendor of the Year 2007, today announced the successful adoption of Borland® SilkTest® for automated software testing. Borland SilkTest was evaluated over several months in a pilot functional testing project after being chosen from a competitive selection process.

Jorge Estevez, Group Operations Manager for Jonckers stated, “The adoption of Borland SilkTest offers our clients the ability to quickly and cost-effectively release dependable products to their global markets. Investing in this technology is critical to the long-term success of Jonckers and the localization industry at large, Borland’s product proved to be far ahead of its competition both during the pilot evaluation and in ongoing customer projects.”

Wolfgang Karas, Regional MD at Borland Software, said, “Jonckers is a valued partner and a recognized innovator in the localization industry, and effective software testing is a vital component of their product’s dependability. The challenge for software delivery teams is to balance cost and time to market with dependable quality. It is our understanding that Jonckers selected SilkTest because it helps them effectively address this challenge – which in turn leads to greater customer loyalty.”

New automated testing processes have now been rolled out across Jonckers’ global testing centers in the Czech Republic, Vietnam and China. Estevez noted, “Being able to scale software testing in this way means we can pass on financial benefits to our customers, strengthening our commitment to provide the most cost effective solutions possible in our market place.”
