JONCKERS DASHBOARD

What is Jonckers Dashboard?

JONCKERS Dashboard is a web application that translates customer business critical information into intuitive pivot charts and KPIs. Jonckers Dashboard enables our customers to have 360° business insight on the status of their projects and accounts. It also serves as a reference for future business decisions.

How it works

Customers can review and filter business statistics such as; how many words are completed per language, per division, per period, per service etc. With quote and quality data incorporated, Jonckers Dashboard can also provide KPIs to cover quarterly spent, quality score, cost saving through TM or MT etc.

Jonckers provides Client Dashboard in two ways

- As a standalone web application of https://dashboard.jonckers.com
  Standalone dashboards use production tracking spreadsheets as the data source and can be customized to present specific KPIs. The data sources are usually updated on a weekly basis.

- As an integrated module in WordsOnline
  WordsOnline dashboard is built from the production data stored in our cloud database. It starts with a set of most frequently used KPIs that are applicable for most customers, and can be customized per client request. WordsOnline dashboard provides real-time data updates from cloud database.

TECHNOLOGY

The Sales Statement
